Professional Summary

Software Engineer with 8+ years delivering Java products in fintech and space-tech environments. I build and maintain production software with a focus on reliability, testing discipline, and maintainable architecture, and I use AI-assisted workflows pragmatically to speed up delivery while preserving quality.

Impact Highlights

- Delivered software across regulated fintech and mission-critical space-tech environments.
- Improved release confidence by expanding automated regression and UI test coverage.
- Combined engineering fundamentals with AI-assisted development to accelerate implementation cycles.

Experience

• 2021 – Present Software Developer | *Profidata AG*

- Developed and maintained core modules of Xentis supporting portfolio operations, compliance workflows, and fund administration.
- Expanded automated UI and regression coverage using QF-Test and JUnit, improving release confidence and reducing manual validation effort.
- Contributed to CI/CD and container-based development workflows to improve delivery consistency in a regulated product context.

Java Spring Swing Eclipse RCP QF-Test JUnit CI/CD Podman Git Fintech

• 2017 – 2021 Software Engineer | *Deimos Engenharia*

- Contributed to ESA Earth Observation applications, including S2G, ESOV, and DFDL4S.
- Built and maintained Java-based tooling for satellite telemetry visualization and data inspection.
- Applied testing and CI practices in mission-critical engineering software projects.

Java Swing Eclipse RCP JUnit CI/CD Git C++ OpenLayers Leaflet ESA

• 2025 – Present Freelance Web Developer | *Independent Projects*

- Delivered custom websites for small businesses from requirements gathering to launch.
- Built responsive interfaces focused on readability, maintainability, and performance.
- Structured reusable frontend components to accelerate delivery and future updates.

React Vite JavaScript HTML CSS Client Delivery

Selected Projects

Xentis Investment Management

CURRENT

Enterprise platform for portfolio management, compliance, and fund administration in regulated financial environments.

🔗 View project

ESOV NG Visualization

ESA

Visualization tooling for ESA satellite orbits and instrument swaths used in mission analysis workflows.

🔗 View project

DFDL4S Data Format

ESA

Binary data binding library enabling read and write operations for CCSDS space packets.

🔗 View project

S2G Earth Observation

ESA

Desktop viewer for inspection of CCSDS-compliant satellite telemetry data.

🔗 View project

Web Delivery Portfolio

WEB

Delivered multiple business websites with responsive UX, maintainable code structure, and clear conversion-oriented user journeys.
